AB - RD-239018 In a frying margarine with low salt content, citric acid ester of monoglycerides, monoglycerides and hydrolysed soy bean lecithin gives good anti-spattering properties. Typically margarine water phase comprises 5.0% skim milk, 14.8% water and 0.2% salt and has pH 4.2. Fat phase comprises 0.2% colour and 79.2% soft fat blend. Compsns. were prep'd. contg. the specified amts. of citric acid ester (I), monoglycerides (II), hydrolysed soy lecithin (III), and standard soy lecithin (IV). Compsn. contg. 0.4% (I) and 0.2% (III) gave very little spattering; (2) contg. 0.15% (I), 0.25% (II), and 0.20% (III) gave a little spattering; (3) contg. 0.4% (II) and 0.2% (III) gave some to strong spattering; (4) contg. 0.4% (I) and 0.2% (IV) gave some spattering and (5) contg. 0.4% (II) and 0.2% (IV) gave strong spattering.
